

Exam.	Regular/Back		
Level	BE	Full Marks	80
Programme	BEX, BCT	Pass Marks	32
Year / Part	III / II	Time	3 hrs.

Subject: - Computer Graphics

- ✓ Candidates are required to give their answers in their own words as far as practicable.
 - ✓ Attempt All questions.
 - ✓ All questions carry equal marks.
 - ✓ Assume suitable data if necessary.
1. ✓ Devise Bresenham's decision parameters for a straight line with negative slope with $|m| < 1$, applying left to right sampling. Assume that the line is in first quadrant.
 2. ✓ Calculate all the pixels of a circle with radius = 10 and center at (50, 50) in the first octant starting from (50, 60) proceeding to positive x axis direction.
 3. ✓ Justify with necessary matrix operations that the two successive rotations in 2-D is additive.
 4. ✓ A 2 units length cube with a diagonal passing through (0,0,0) and (2,2,2) is spinning about an axis parallel to z-axis with angle 180 degree. Obtain the matrix involved for the operation.
 5. ✓ Derive appropriate mathematical relation to transform 2-D scene (points) in world window to normalized view window.
 6. ✓ Mention different types of projections. Derive oblique projection matrix with necessary assumptions.
 7. ✓ Discuss Phong Illumination model with distance consideration.
 8. ✓ Write short notes on:
 - a) ✓ Backface Detection Algorithm
 - b) Flat Panel Display
